

## Photo Challenge.

You will need access to a camera or smartphone for this one.

Choose some everyday objects and take photos of them from interesting angles.

What difference does it make if you do the photo in portrait or landscape mode? Have a go at panoramic photos too.

Can you hide what the object is by zooming in really close?

Can you make the object look giant sized by photographing it from low down looking up?

Can you make it look tiny (but still recognisable) by moving away from it?

Can you make things look bigger or smaller than they are? (It is called forced perspective). Try keeping the object close to the camera but have something - or someone - far away in the background)

If you use a torch on the object in a dark room can you get interesting shadows? (water makes brilliant shadows).

Lighting makes a huge difference to photographs. What different lighting conditions can you use, and how do they affect your photos?

Have a go at cropping your photos to make them look even better and then pick your best photos (minimum 5 but happy to receive lots more) and post them onto our private Facebook group or email them to me.

These photos need to be examples of a range of skills (portrait, landscape, close up, forced perspective, shadows, lighting etc) so choose carefully.
